OpenStreetMap

OpenStreetMap.org

What is it?

OpenStreetMap (OSM)

- Not software
- It's a collaborative project to create a free & editable map of the world.
- The Wikipedia of Cartography
- Anyone can contribute

www.openstreetmap.org/

What is it?

- Open Geo Data
- There are many "free" basemaps, Google, Yahoo, Bing...
- These only give limited rights of use
- OSM gives users rights to any kind of reproduction or processing
- Creative Commons license

www.openstreetmap.org/

The Map

Methodology

People, like you and me, gather location data across the globe from a variety of sources such as:

- Recordings from GPS devices
- Public domain data
- Digitizing against free satellite imagery

This information then gets uploaded to OpenStreetMap's central database from where it can be further modified, corrected and enriched by anyone who notices missing facts or errors about the area.

How accurate/complete is it?

- Wiki-style process...no guarantee of accuracy of any kind. Then again, few proprietary maps carry a guarantee of accuracy, either.
- Proprietary map include intentional errors called easter eggs
- These errors allow them to catch you using their data illegally
- All OSM users have a stake in having accurate data. If one person puts in inaccurate data, maliciously or accidentally, the other 99.9% of people can check it, fix it, or get rid of it.

How accurate/complete is it?

- Your mileage may vary. The Wikipedia project has shown that a large amount of good quality data can be collected but it can be difficult to weed out the inevitable errors.
- A full **editing history** is stored for each user & there's a History tab on the main page that shows recent edits to the selected area.
- At the moment the best way to answer this question is to judge for yourself.

OSM XML data format

- *.osm files
- Nodes
- Ways
- Attributes → Tags (key and value)
- "key=value"
- Relations

Nodes

- Coordinate pair (GCM 7 decimal places)
- Timestamp of last edit, user ID, changeset ID
- Zero or more tags
- Used to map Points of Interest (POI's)

Ways

- Two or more nodes connected
- Timestamp of last edit, user ID, changeset ID
- Zero or more tags
- Used for linear features
- If the first and last nodes are identical an area (polygon) is formed

Lots of creative tools and products out there

Tags

- Key Value pair
- Objects can have multiple tags
- Case insensitive

Identify:

- Attributes
- Different POI's
- Differentiate between circular ways and actual areas.

Data Creation

OSM data can be created via many interfaces and tools

- OSM Potlatch online editor
- JOSM Offline Java Editor
- QGIS Plugin
- ArcGIS toolbox
- Mobile apps → iPhone
- Merkaartor
- Mapzen
- OSM2Go

• ...

Data Download

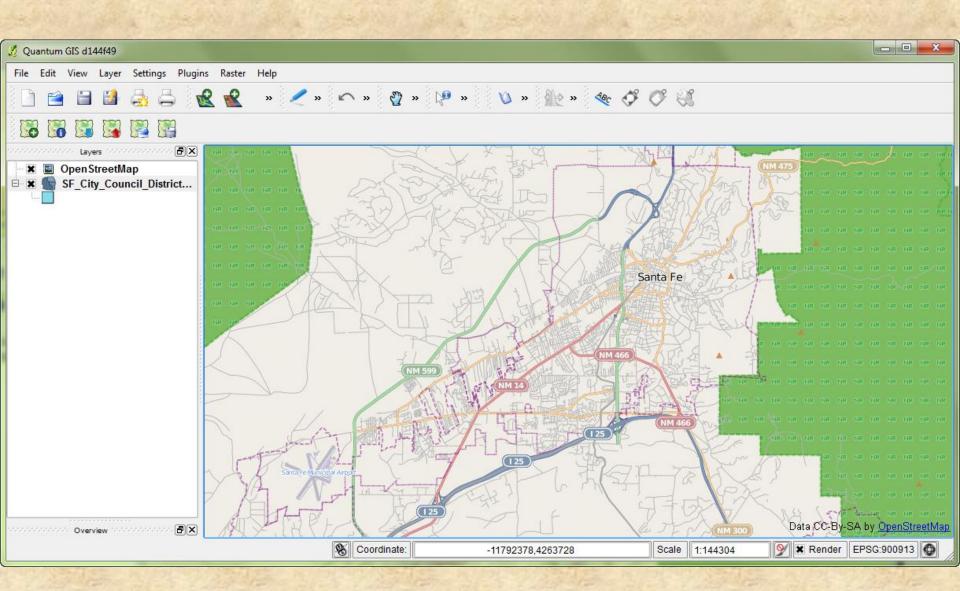

Data can be downloaded for limited areas

- QGIS Plugin
- ArcGIS toolbox
- Cloudmade extracts by country
- PlanetOSM

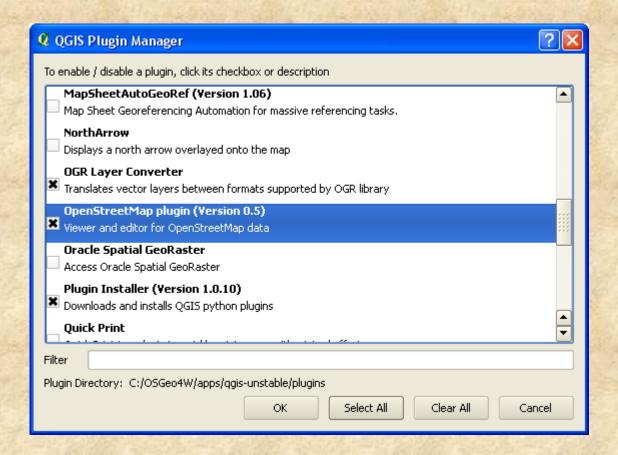

http://wiki.openstreetmap.org/wiki/Planet.osm
Allows you to download snapshots of the OSM database
